

Project Synopsis

Project Title

Expense Tracker

Introduction

The Expense Tracker is a simple web-based application developed using **HTML, CSS, JavaScript, and React.js**. It helps users record their daily income and expenses in an organized way. The application automatically calculates the total income, total expenses, and the remaining balance, making it easier to manage personal finances.

Objective

The main objective of this project is to provide a simple and user-friendly interface for tracking daily financial transactions. It also helps in understanding the basics of frontend web development using React.

Problem Statement

Many people find it difficult to keep track of their daily expenses, which can lead to poor financial management. This project provides a simple solution by allowing users to record and monitor their income and expenses in one place.

Features

- Add income and expense transactions
- Display all transactions in a list
- Delete unwanted transactions
- Automatically calculate:
 - Total Income
 - Total Expenses
 - Current Balance
- Store data using Local Storage
- Responsive and user-friendly interface

Technologies Used

- HTML5
- CSS3
- JavaScript (ES6)

- React.js
- Local Storage

Modules

1. Dashboard

Displays the total balance, income, and expenses.

2. Transaction Form

Allows users to enter the transaction name, amount, and transaction type (Income/Expense).

3. Transaction List

Displays all transactions with the option to delete them.

4. Data Storage

Stores transaction data in the browser using Local Storage so that the data remains available after refreshing the page.

Expected Outcome

The application will help users maintain a simple record of their daily income and expenses. It will provide an easy way to monitor financial activities and improve basic money management.

Future Enhancements

- Edit existing transactions
- Search and filter transactions
- Monthly and yearly reports
- Charts and graphs for expense analysis
- User authentication
- Export data as PDF or Excel

Conclusion

The Expense Tracker is a simple, responsive, and efficient frontend application that demonstrates the use of HTML, CSS, JavaScript, and React.js. It provides a practical solution for managing personal finances while helping students understand important frontend development concepts such as components, state management, event handling, and Local Storage.
