

SOFTWARE REQUIREMENTS SPECIFICATION (SRS)

1. Introduction

1.1 Purpose

The purpose of the Expense Tracker is to provide users with a simple web-based system for recording and monitoring their daily expenses.

The system is designed as a single-page frontend application and focuses on basic expense management functionality.

1.2 Scope

The Expense Tracker allows users to:

- Enter expense details.
- Add expenses to the expense list.
- View recorded expenses.
- Calculate total expenses.
- Delete individual expenses.
- Organize expenses using categories.

The current version is a frontend-based application and does not require a backend server or database.

2. Overall Description

2.1 Product Perspective

The Expense Tracker is a standalone web application that runs in a web browser. It uses HTML for structure, CSS for presentation, and JavaScript for application logic.

Architecture:

User → Webpage → JavaScript → Expense List → Total Expense

2.2 User Characteristics

The application is designed for general users who want to keep track of their daily spending.

No advanced technical knowledge is required to use the application.

2.3 Operating Environment

The application can run on:

- **Google Chrome**
- **Microsoft Edge**
- **Mozilla Firefox**
- **Other modern web browsers**

Hardware Requirements

- **Computer/Laptop**
- **Keyboard and mouse**
- **Minimum 2 GB RAM recommended**

Software Requirements

- **Web browser**
 - **Code editor such as Visual Studio Code**
 - **HTML**
 - **CSS**
 - **JavaScript**
-

3. Functional Requirements

FR-01: Add Expense

The system shall allow the user to enter an expense and add it to the expense list.

FR-02: Enter Expense Details

The system shall allow the user to enter details such as:

- **Expense name**
- **Amount**
- **Category**

FR-03: Display Expenses

The system shall display added expenses on the webpage.

FR-04: Calculate Total

The system shall automatically calculate the total amount of all added expenses.

FR-05: Delete Expense

The system shall allow the user to delete an individual expense.

FR-06: Update Total

When an expense is added or deleted, the system shall update the total expense amount.

FR-07: User-Friendly Interface

The system shall provide a simple and easy-to-understand interface.

4. Non-Functional Requirements

4.1 Usability

The application should be simple and easy to use.

4.2 Performance

The application should respond quickly to user actions such as adding and deleting expenses.

4.3 Reliability

The application should correctly calculate the total expense based on the records entered by the user.

4.4 Compatibility

The application should work properly on commonly used modern web browsers.

4.5 Maintainability

The code should be organized into separate HTML, CSS, and JavaScript files so that future modifications can be made easily.

4.6 Responsiveness

The webpage should provide a usable interface on different screen sizes.

5. System Requirements

Input Requirements

The user provides:

- Expense name
- Expense amount

- Expense category

Processing Requirements

JavaScript processes the entered information and:

- Creates an expense record.
- Adds it to the expense list.
- Calculates the total amount.
- Removes an expense when requested.

Output Requirements

The system displays:

- Expense records.
 - Expense categories.
 - Individual expense amounts.
 - Total expense amount.
-

6. User Interface Requirements

The webpage should contain:

1. Project title/header.
 2. Expense input section.
 3. Expense name input field.
 4. Amount input field.
 5. Category selection/input.
 6. Add Expense button.
 7. Expense list.
 8. Delete button for each expense.
 9. Total expense section.
-

7. Use Case

Use Case: Add Expense

Actor: User

Steps:

1. User opens the Expense Tracker webpage.
2. User enters the expense name.
3. User enters the amount.
4. User selects a category.
5. User clicks Add Expense.
6. The system adds the expense to the list.
7. The system updates the total expense.

Use Case: Delete Expense

Actor: User

Steps:

1. User selects an existing expense.
2. User clicks the Delete button.
3. The system removes the expense.
4. The system recalculates the total.

8. Constraints

- The current project is frontend-based.
- No user authentication is implemented.
- No backend server is required.
- No database is used in the basic version.
- Data may not persist after refreshing the webpage unless Local Storage is implemented.

9. Future Enhancements

The following features can be added in future versions:

- User authentication.

- Database connectivity.
- Local Storage.
- Expense charts and graphs.
- Monthly/yearly reports.
- Budget limits.
- Search and filter functionality.
- Export expenses to PDF or Excel.
- Mobile application.

10. Conclusion

The Expense Tracker is a simple single-page web application designed to help users record and monitor their daily expenses. The project demonstrates the practical implementation of HTML, CSS, and JavaScript.

The system provides essential expense-management functions while maintaining a simple and user-friendly interface. It can be further enhanced with databases, authentication, reports, and data visualization in future versions.
